Full-Stack and Smart Contract Engineer

SUMMARY

Full-stack and smart contract engineer with three years of experience building and deploying production web applications and decentralized systems. Experienced in handling complete feature lifecycles, from Solidity and Rust smart contracts to Next.js frontends and deployments on Vercel and Railway. Winner of three hackathons across Celo, Somnia, and Arbitrum Stylus. Active maintainer of Compose, an ERC-2535 Diamond standard smart contract library. Currently building GameArena, a wager-based skill gaming platform on Celo live at gamearenahq.xyz, and Pantheon Arena, an autonomous multi-agent system on Somnia.

CORE SKILLS

Smart Contracts: Solidity, Rust (Arbitrum Stylus, Stellar Soroban, Polkadot ink!), Foundry, Hardhat, ERC-20, ERC-721, ERC-1155, ERC-2535 Diamonds, ERC-6909, SEP-41

Frontend: React, Next.js (App Router), TypeScript, Tailwind, wagmi, viem, RainbowKit, Privy, MiniPay

Backend: Node.js, Bun, Express, Python, Flask, PostgreSQL, REST APIs, Edge Functions, Server-Sent Events

Chains: Ethereum, Celo, Polkadot, Stellar, Arbitrum, Somnia, Solana, Base

Infrastructure: Vercel, Railway, Docker, GitHub Actions

AI Integration: On-chain LLM agents (Somnia Qwen3-30B), Groq, Gemini, Vercel AI SDK, ElevenLabs

Realtime: WebSocket / STOMP, LiveKit, Server-Sent Events

KYC & Payments: Dojah, QoreID, Paystack

Testing: Foundry forge, Bun test, Jest, Vitest

WORK EXPERIENCE

Software Engineer | Full-time | Remote

ARK Studios (Tsion Corp) Jul 2026 – Present

ARK Studios builds products within the Tsion Corp group, including WorldStreet, Square, and ArkRide.

- Led frontend development for Square, a social discovery platform available at square.tsionark.com. Built core features including conversation starters ("winks"), member discovery decks ("Pals"), audio rooms ("Gistrooms"), community groups ("Houses"), and activity feeds with stories and posts.
- Implemented creator monetization tools (tips, gifts, tickets, and store listings) using the KASH payment system, presenting a web2 user experience. Released as an installable PWA with push notifications for iOS and Android, operating standalone and within the core ARK application.
- Contributed to WorldStreet, ARK's financial trading application, developing trading interfaces, token management, portfolio views, and gasless multi-chain transaction flows.
- Optimized web performance through code-splitting and reduced API overhead, integrated referral programs, and embedded Square into the main WorldStreet user dashboard.
- Built the pre-launch landing page and waitlist portal for ArkRide, ARK's upcoming ride-hailing service.

Stack: Next.js, React, TypeScript, Tailwind CSS, TanStack Query, LiveKit, WebSockets, viem, PWA Push Notifications, KASH

Frontend Engineer | Contract | Remote

RentBuyStay May 2026 – Present

A Nigerian real estate marketplace for long-term rentals, property sales, and short-stay accommodations.

- Served as lead frontend engineer across three web applications: the primary marketing site, a multi-role user dashboard, and an administrative control panel.
- Developed real-time chat with call and WhatsApp integrations, along with media management tools for property listings.
- Integrated identity verification via Dojah and QoreID, payment gateways via Paystack, and interactive map interfaces using Leaflet.
- Engineered the admin panel for moderation, verification queues, content management, staff permissions, and operational analytics.

Stack: Next.js, React, TypeScript, Redux Toolkit, RTK Query, WebSockets, Dojah, QoreID, Paystack, Leaflet

Frontend Engineer | Contract | Remote

Earth Sep 2026 – Present

A digital marketplace connecting agricultural producers, food suppliers, and buyers.

- Developed the public marketing platform, including waitlist registration, email verification, referral tracking, location lookup, and pitch presentation modules.
- Integrated seller onboarding, authentication workflows, inventory tools, and public catalog endpoints with backend services.
- Built management interfaces for vendor orders, payout processing, referral tracking, messaging, and profile settings.

Stack: React, TypeScript, TanStack Start, Redux Toolkit, RTK Query, Vite, Tailwind CSS

Frontend Engineer | Full-time

ADTM • Remote Apr 2024 – Apr 2025

- Led frontend development for AfreTrade (afretrade.com), a cross-border marketplace, maintaining applications across Next.js with TypeScript and Vite with JavaScript
- Collaborated closely with backend developers, designers, and product stakeholders to align UI implementation with business requirements and deliver a consistent user experience
- Integrated and managed Swagger-documented REST APIs across both apps, using Redux for global state management on the Next.js TypeScript codebase
- Built and maintained a reusable UI component library while maintaining cross-browser compatibility and application responsiveness

Stack: Next.js, TypeScript, Vite, JavaScript, Redux, Swagger API, Tailwind CSS

IT Support Specialist | Full-time

KPMG Nigeria • KPMG Tower, Victoria Island, Lagos • Hybrid Mar 2024 – Nov 2024

KPMG provides audit, tax and advisory services.

- Maintained documentation of IT systems, processes, and procedures across the team
- Reduced downtime with effective troubleshooting and timely problem resolution
- Provided remote support for off-site employees without sacrificing job performance
- Created and resolved help desk tickets across desktop and network issues

Lead Frontend Engineer | Remote

Belsoft Systems Jan 2024 – Aug 2024

BelSoft is a professional software company that provides expert information technology services to the corporate sector.

- Improved dashboard loading performance by 20% through optimized React components and Fetch API integrations
- Shipped a streamlined vendor dashboard, collaborating with backend developers and designers on overall user experience
- Converted Material Design Figma templates into responsive Next.js and Tailwind landing pages
- Increased user engagement by 30% and lowered bounce rates by 20% following a complete website redesign

Frontend Developer | Internship | Remote

Scrimba Sep 2023 – Mar 2024

Scrimba is a remote company that offers interactive online courses to help people learn to code and become software developers.

- Built responsive web components in HTML, CSS, and JavaScript
- Created dynamic, component-driven web applications using React
- Completed hands-on capstone projects to deepen frontend skills

Student Developer | Internship | Remote

ALX Full-Stack Development Jul 2022 – Oct 2022

- Built backend services with Python, Flask, PostgreSQL, and SQLAlchemy
- Shipped RESTful APIs through self-directed learning and hands-on practice
- Completed all capstone projects required for graduation

OPEN SOURCE AND MAINTAINER WORK

Compose, Author and Maintainer

github.com/ogazboiz/Compose

- Authored an open-source ERC-2535 Diamond standard smart contract library promoting modular, readable, composable on-chain architecture under a design philosophy called Smart Contract Oriented Programming (SCOP)

FlowFi, Maintainer (Stellar Soroban streaming payments protocol)

github.com/LabsCrypt/flowfi

- Maintained a continuous payment streaming protocol on Stellar Soroban, managing technical decisions across Soroban smart contracts, backend services, and the Next.js frontend
- Built a real-time stream dashboard using Server-Sent Events, complete transaction state handling, live notification dropdowns, and core smart contract stream creation functions
- Drove backend reliability work including FEE_COLLECTED event handlers, treasury fee reporting, GitHub Actions CI, and stream activity history endpoints

RemitLend, Maintainer (Stellar Soroban lending and cross-border remittance)

github.com/LabsCrypt/remitlend

- Maintained a protocol on Stellar Soroban that converts remittance histories into on-chain credit scores to provide loans for migrant workers
- Owned backend infrastructure decisions: ESLint/Prettier setup, Redis caching layer, database migrations, unique constraints on loan_events, and health check endpoints
- Shipped full transaction lifecycle states on the frontend and authored lending pool unit tests covering deposit, borrow, repay, and liquidation paths

SELECTED PROJECTS

Pantheon Arena, Autonomous Multi-Agent System on Somnia (Agentathon 2026)

Live: pantheon-arena-eight.vercel.app • Repo: github.com/HACK3R-CRYPTO/pantheon-arena • Demo: youtube.com/watch?v=pEK5uALlo30

- Solo-built a fully autonomous multi-agent system composing all three Somnia base agents (Reactive Contracts, LLM Inference Agent Qwen3-30B, JSON API Agent) inside one same-block reactive callback
- Wrote 6 Solidity contracts with 86 passing Foundry tests: Arena, GodRegistry, GodMind, WorldState, NarratorAgent, PantheonToken
- Developed an on-chain inference engine in Solidity that analyzes opponent history to predict future moves directly on-chain
- Implemented a multi-tier LLM system utilizing Somnia validator consensus primarily, Groq Llama-3.3 for off-chain fallbacks, and a local pool as a backup
- 300+ matches resolved live on Shannon testnet at submission

GameArena (Gamerstew), Wager-Based Skill Gaming on Celo (Active)

Live: gamearenahq.xyz • Repo: github.com/HACK3R-CRYPTO/Gamerstew

- Developing a gaming platform on Celo where players wager GoodDollar (G$) on skill games, compete in tournaments, and contribute to funding Universal Basic Income
- Merged over 100 pull requests covering Privy authentication, competitive game modes, MiniPay integration, anti-cheat validation, referral systems, and real-time leaderboards

Stack: Next.js, Solidity, TypeScript, Privy, wagmi, MiniPay, GoodDollar

Celo Runners, Play-to-Earn Runner Game (Celo Hackathon Winner)

Repo: github.com/ogazboiz/Celo_runners

- Built a play-to-earn endless runner on Celo where players earn QUEST tokens and badge NFTs by completing stages
- Integrated an on-chain marketplace for token and NFT trading
- Shipped MiniPay and Farcaster MiniApp distribution surfaces

Stack: Next.js, Solidity, Foundry, wagmi, viem

StreamBeat, Real-Time Rhythm Gaming on Somnia Data Streams (Somnia Hackathon Winner)

Live: stream-beats.vercel.app • Repo: github.com/HACK3R-CRYPTO/StreamBeat

- Built a competitive rhythm game on Somnia where players buy BEAT tokens, mint a Gem NFT to unlock games, score points in rhythm and memory rounds, and compete on live leaderboards via Somnia Data Streams
- Implemented an anti-cheat backend that validates every score against game time and combo math before on-chain submission
- Designed automated prize-pool distribution: 40% first place, 25% second, 15% third, 10% places 4–10, 10% participation rewards

Stack: Next.js, Solidity, Somnia Data Streams, wagmi

Mindchain AI, On-Chain Gated AI on Arbitrum Stylus (Arbitrum Stylus Hackathon Winner)

Live: mindchainai.vercel.app • Repo: github.com/HACK3R-CRYPTO/mindset-ai

- Built an on-chain gated AI experience where users buy AI usage credits on chain, submit knowledge to a community registry, run real-time MNIST inference, and access a hybrid LLM chat backed by Gemini
- Wrote two Rust + Stylus contracts: ApiAuthorization for credit purchase and spend tracking, and KnowledgeShare for crowd-sourced knowledge submission and voting
- Integrated a Flask MNIST classifier and Node + Gemini chat service that validates user credits via Stylus contracts before responding, with Privy for embedded wallet onboarding

Stack: React, Vite, Tailwind, Rust, Arbitrum Stylus, ethers v6, Flask, TensorFlow, Gemini, Privy

Sage, Voice-First AI Agent Wallet on Solana (dev3pack Hackathon)

Repo: github.com/ogazboiz/sage

- Built a voice-controlled wallet using Solana, LI.FI for cross-chain swaps, ElevenLabs for text-to-speech, and x402 for agentic payments

Rust Blockchain Masterclass, Multi-Chain Cohort (Web3Bridge)

Repo: github.com/ogazboiz/Web3bridge-Rust-Masterclass-Cohort-I

- Completed a 7-week intensive cohort writing Rust for Arbitrum Stylus, Stellar Soroban, and Polkadot ink!
- Implemented ERC-20, ERC-6909, ReentrancyGuard, and an employee management system using SEP-41 tokens, all in Rust

HACKATHONS AND RECOGNITION

4x Hackathon Winner across Celo, Somnia, and Arbitrum Stylus.

Winning Projects:

- Celo Runners (Celo Hackathon): Play-to-earn endless runner on Celo with on-chain QUEST token marketplace, NFT badges, MiniPay, and Farcaster MiniApp integration
- StreamBeat (Somnia Hackathon): Real-time competitive rhythm game powered by Somnia Data Streams featuring live leaderboards, NFT-gated access, and anti-cheat validation
- Mindchain AI (Arbitrum Stylus Hackathon): On-chain gated AI application using Stylus credit metering, community knowledge registry, MNIST inference, and hybrid Gemini chat integration

Recent Hackathon Submissions:

- Pantheon Arena (Somnia Agentathon 2026): Autonomous multi-agent system combining three Somnia base agents within a reactive callback architecture
- Sage (dev3pack Hackathon): Voice-controlled wallet on Solana using LI.FI, ElevenLabs, and x402

EDUCATION

Blockchain Development (Solidity and Web3)

Web3 Development Bootcamp • Lagos, Nigeria — Jan 2025 – May 2025

- Track focused on Solidity smart contracts, EVM fundamentals, Hardhat, and frontend integration.

Rust Blockchain Segment

Web3 Development Bootcamp • Lagos, Nigeria — May 2025 – Sep 2025

- Intensive track building smart contracts and protocols using Rust for Arbitrum Stylus, Stellar Soroban, and Polkadot ink!.

Zero-Knowledge (ZK) Segment

Web3 Development Bootcamp • Lagos, Nigeria — Jan 2026 – Apr 2026

- Track covering zero-knowledge proofs, circuits, and privacy-preserving protocol architectures.

B.Sc. Computer Science

Edo State University Uzairue • Edo State, Nigeria — Oct 2019 – Jun 2023
